Sikaflex®
SILANE TERMINATED POLYMER TECHNOLOGY
WHENEVER AN ELASTIC BONDING OR SEALING IS NEEDED, Sika offers a wide range of solutions suitable for the whole assembly process while satisfying the most demanding market requirements. Bonded joints have to meet severe specifications to demonstrate performances in shear, peel and fatigue, achieving reliable and long-term results. Sikaflex® Silane Terminated Polymer (STP) sealants and adhesives are based on a patented technology developed by Sika. Here, raw materials, processes and products have been carefully selected to advance the working properties and capabilities of the end product. Thanks to this technology, versatile product performances and curing systems are feasible to offer best suited solutions to meet customer requirements. Sika has also ensured that this technology and product range complies or even surpasses the most severe and demanding Environment, Health and Safety requirements. The combination of these attributes and the adhesion friendly behavior makes it a very user friendly and reliable solution.

The Sikaflex® Silane Terminated Polymer Technology is overall highly sustainable as it combines proven durability and performance together with complying with most severe EHS standards. Thanks to its high performance in adhesion spectrum, solvents for pretreatment are reduced as well, which further reduces the footprint over the whole system.

The whole technology is non-hazardous, free of isocyanate, solvents and PVC and shows lowest emissions. The sustainability logo marks the best in class EHS products, and even exceed the common high level and most severe EHS standards to set a new benchmark. As they are even phthalate and tin free on top. It clearly follows the Sika way of More Value Less Impact and makes it a great solution where low emission and EHS friendly technologies are demanded.

SUSTAINABILITY AND EHS PERFORMANCE

The Sikaflex® Silane Terminated Polymer Technology is overall highly sustainable as it combines proven durability and performance together with complying with most severe EHS standards. Thanks to its high performance in adhesion spectrum, solvents for pretreatment are reduced as well, which further reduces the footprint over the whole system.

The whole technology is non-hazardous, free of isocyanate, solvents and PVC and shows lowest emissions. The sustainability logo marks the best in class EHS products, and even exceed the common high level and most severe EHS standards to set a new benchmark. As they are even phthalate and tin free on top. It clearly follows the Sika way of More Value Less Impact and makes it a great solution where low emission and EHS friendlier technologies are demanded.

Sika offers a uniquely wide range of products and systems within the STP technology portfolio.

Here only the core product range is outlined but more products for specific or specialized applications are available as well. Below the most relevant features and facts about the core product range can be found. For more detailed information please consult the latest Product Data Sheets or contact your local Sika representative.

KEY FEATURES OVERVIEW

### SEALANT

### ADVANCED PERFORMANCES AND FEATURES

#### SEALANT

**Sikaflex®-522**

High weathering, ageing and mold resistance
- High color stability under UV
- Broad adhesion range
- Suitable for ventilation and incidental food contact
- Meets highest EHS standards and ECP classification

**Sikaflex®-508**

Compatible with polystyrene boards and bituminous materials
- Very broad adhesion range
- Excellent workability
- Meets highest EHS standards

**Sikaflex®-950**

Adhesive sealant for large surface bonding
- Excellent pumpability
- Low assembly forces yet good non-sag properties
- Broad adhesion range
- Meets ECP classification
- Meets highest EHS standards

**Sikaflex®-553 L15 / L30**

Fast curing assembly adhesive
- Broad adhesion range
- Can be sanded
- Good pumpability over long distances
- Good gap filling capabilities
- Two speeds available

#### ADHESIVE SEALANT

**Sikaflex®-551**

Highest weathering and ageing resistance
- High mold and fungus resistance
- Suitable for ventilation and incidental food contact
- Surpasses highest EHS standards (tin free)

**Sikaflex®-953 L15 / L30**

Fast curing assembly adhesive
- Broad adhesion range
- Can be sanded
- Good pumpability over long distances
- Good gap filling capabilities
- Two speeds available

#### ASSEMBLY ADHESIVE

**Sikaflex®-545**

High initial grab adhesive
- Excellent workability
- Broad adhesion range
- Meets ECP classification
- Meets highest EHS standards

**Sikaflex®-953 L15 / L30**

Fast curing assembly adhesive
- Broad adhesion range
- Can be sanded
- Good pumpability over long distances
- Good gap filling capabilities
- Two speeds available

**Sikaflex®-552 AT**

Proven assembly adhesive
- Capable of withstanding high dynamic stresses
- High elasticity
- Broad adhesion range
- Excellent workability
The Silane Terminated Polymer products serve as best solutions for very diverse applications due to the versatility of performance. This page provides an overview about the key technical facts of the core products range.

- Best suited

Please consult most current Sika Product Data Sheets or your local Sika contact prior to any use. To achieve better adhesion with critical substrates or applications, please refer to the Pretreatment Chart for Silane Terminated Polymers.

The Silane Terminated Polymer products serve as best solutions for very diverse applications due to the versatility of performance.
Sika with its 17,000 employees in more than 90 countries is active in multiple industry markets with its core competences in sealing, bonding, damping, reinforcing and protecting. So is the Sika Silane Terminated Polymer technology. It proves as well suited solution in multiple market segments and applications day by day.
FIELDS OF APPLICATION

THANKS TO THEIR VERSATILE MECHANICAL AND APPLICATION PERFORMANCEs, the Sikaflex® Silane Terminate Polymer adhesives and sealants are used for a wide variety of interior and exterior applications throughout the different industry sectors. Sika’s broad product portfolio enables to have the right product for every application in typical markets like transportation, appliances, industrial equipment or building elements. Below you find an extract of potential applications and best suited products. For more detailed information please refer to the market and application related documentation.

AIR AND VENTILATION
Many elastic bonding and sealing joints for frame and body are required in this industry with respective qualification. For sealing applications Sikaflex®-522 and Sikaflex®-551 for bonding are well suited. For fast fixation the Sikaflex®-545 and for faster processing or larger joints Sikaflex®-953 or Sikaflex®-950 might be used.

METAL AND FURNITURE WORKSHOPS
Stiffener assembly to metal body or mirror bonding with proven Sikaflex®-552 AT or for fast handling with Sikaflex®-545. Sealing operations can be performed with Sikaflex®-515. The products show excellent adhesion on most metals and powder coats with minimal pretreatment.

FOOD STORAGE AND COOLING
Elastic structural bonding and sealing of organic glass on metal frame can be achieved with Sikaflex®-552 AT. For mold resistant joints either Sikaflex®-551 or Sikaflex®-522 with indirect food contact approval are best suited.

CARAVAN AND MOTORHOME
Elastic sealing and bonding are common operations in the manufacturing of Caravan and Motorhome. Sikaflex®-522 for sealing and Sikaflex®-552 AT or Sikaflex®-953 for assembly bonding support smooth and easy processes.

BUS AND COACH
Sika provides easy to use high-performance flexible one- and two-component Sikaflex® STP adhesives. In addition the Booster technology will accelerate the curing speed for shorter cycle times.

BUILDING OF AUTOMATS
In construction of diverse automats, many elastic bonding and sealing joints are required. For sealing applications Sikaflex®-522 and Sikaflex®-551 for bonding are well suited. For fast fixation Sikaflex®-545 and for faster processing Sikaflex®-953 can be used.

WIND ENERGY
Nacelle and machine parts in wind turbines require long lasting and weathering resistant joints. Sikaflex®-521 UV and Sikaflex®-953 have proven track record but Sikaflex®-522 and Sikaflex®-551 are well suited, too.

AGRICULTURAL AND CONSTRUCTION EQUIPMENT
Elastic sealing with Sikaflex®-522 or bonding with Sikaflex®-552 AT as well as the use of the Booster technology well fits this industry.

EQUIPMENT HOUSING
Constructions of equipment housings are diverse but most require elastic bonded and sealed joints. For sealing applications Sikaflex®-515 and Sikaflex®-552 AT for bonding are well suited. For fast fixation Sikaflex®-545 and for faster processing Sikaflex®-953 is be the best solution.

PRE-FABRICATED BUILDING ELEMENTS
The constructions of pre-fabricated building elements are diverse and with manifold sealing and bonding operations. Sikaflex®-950 or Sikaflex®-953 can serve as fast curing sealants and adhesives. Best solution for high mold resistance is Sikaflex®-522 and fast fixation Sikaflex®-545.
SIKA OFFERS SEALING AND BONDING SYSTEMS IN DIFFERENT PACK SIZES DEPENDING ON PRODUCT AND APPLICATION REQUIREMENTS. Several types of packaging exist: cartridges, unipacks, pails or drums. The choice of the right dispensing equipment depends on the frequency, volume and the type of application. Manual are best suited for on-site and smaller applications. Pneumatic dispensers are particularly suitable to create precise and regular beads and when using higher viscosity adhesives. Furthermore in cases when sensitive operations need to be realized with a simple manual dispenser, especially if continuous and long joints must be formed. Pumping and dosing equipment serve best in higher volumes and output as well as automation is required. Sika’s application experts and system engineers can provide support in selecting the suitable solution to meet the specific requirements.

TYPICAL PACK SIZES OF Sikaflex® SOLUTIONS

- **300 ml cartridge for 1-component products**
- **400/600 ml unipacks for 1-component products**
- **Dual- / side-by-side cartridge for 2-part products**
- **195 liter drums and 23 liter pail**

**Application Tools**

- **Manual dispenser for 300ml cartridges**
- **Pneumatic dispenser for unipacks**
- **Electronic dispenser for unipacks**

- **Manual dispenser for unipacks**
- **Pneumatic dispenser for dual- / side-by-side cartridges**
  - Correct mixer must be used
APPLICATION TIPS

NOZZLE GEOMETRY
Leaks and stress in the components and other problems can be eliminated by proper preparation before bonding. Cutting the adhesive nozzle correctly reduces potential sources of errors. This allows the adhesive to be applied with the right dimensions and perform properly. For bonding applications the adhesive should preferably be applied to the joint in the form of a triangular bead. This ensures optimal wetting of the material by the adhesive. It also prevents gaps in the adhesive bead, insufficient compensation for the tolerances of the joined parts, and an excessively thin layer which could result in water entry. With plastics, an adhesive layer that is too thin can lead to stress cracks. With a flush bond on a flange, the height of the nozzle cut should correspond to the height of the flange. The surfaces of the joined parts are brought even by pressing (see sketches).

For single-component moisture curing adhesives, the bonded joint should be no wider than 20 mm due to the longer curing time.

Adhesive application

Dimensions:
- Thickness = h
- V-cut for application of a triangular adhesive bead
- Diameter = bead width
- V height = approximately twice the required adhesive layer thickness

*If necessary use spacer*

Bonding and sealing surfaces must be clean, dry and free of oil and grease. If necessary, sand bonding surfaces with a scouring pad and remove the dust. Remove heavy soiling with Sika® Remover-208 or Sika® Cleaner P. See the treatment Chart or Additional Product Information Sheet for more information.

Use a scraper and Sika® Remover-208 to remove any excess uncured adhesive. Other cleaners may interfere with the curing process.

PROCEDURE

**BONDING**
When using non-sag products, apply the adhesive as a triangular bead. Cut the nozzle according to the printed scale and hold the gun perpendicular while applying. With two-component products, use the recommended static mixer and apply the adhesive in dots or as a bead. Observe the minimum layer thickness and use spacers as needed.

Position and press both plates so that they adhere to one another. If necessary, fix the component and leave it to polymerize. Respect skin and open time on assembly, and handling time for further processing.

Fill up the space with Sikaflex®. Apply it from the bottom. Avoid air entrapment.

Remove excess Sikaflex® with a flexible spatula.

Remove masking tape immediately after this operation.

Tool surface with Sika® Tooling Agent N. All tooling and finishing must be carried out within the skin time of the sealant.

**SEALING**

Tape the joint with masking tape even to the surface. If required, limit the joint space with a PE-foam using a wooden rounded spatula.

Use a scraper and Sika® Remover-208 to remove any excess uncured adhesive. Other cleaners may interfere with the curing process.
GLOBAL BUT LOCAL PARTNERSHIP

WHO WE ARE
Sika is a specialty chemicals company with a leading position in the development and production of systems and products for bonding, sealing, damping, reinforcing and protecting in the building sector and the motor vehicle industry. Sika's product lines feature concrete admixtures, mortars, sealants and adhesives, structural strengthening systems, flooring as well as roofing and waterproofing systems.
