

SikaBiresin® CR132 Product Family FOR COMPOSITES IN THE AIRCRAFT INDUSTRY

The SikaBiresin® CR132 product family has been specially developed for the manufacture of light aircraft and general aviation aircraft. With a glass transition temperature of up to 160 °C, the system can also withstand flight operations in warmer regions of the world, so darkly painted surfaces can also be realized. Four resins and five hardeners are building one product family for more flexibility.

- SikaBiresin **CR132: Hand laminating base system with four hardeners and equal mechanical properties
- SikaBiresin® CR131: Vacuum infusion version with equal mechanical properties
- SikaBiresin® CR132 FR and CR134 FR: Flame retardant versions for hand lay-up

SikaBiresin® CR132

DESCRIPTION

- Hand lay-up system with a glass transition temperature (Tg) up to 160 °C
- Modular system with four standard hardeners for potlife between 60 and 480 minutes
- Excellent mechanical properties
- Particularly suitable for parts that require a good heat resistance, e.g. dark painted aircraft parts affected by solar heating

DESCRIPTION

- Vacuum infusion version of SikaBiresin® CR132
- Same hardeners as for SikaBiresin® CR132
- Equal mechanical properties as SikaBiresin® CR132
